

NAME

curl_global_cleanup - Global libcurl cleanup

SYNOPSIS

```
#include <curl/curl.h>
```

```
void curl_global_cleanup(void);
```

DESCRIPTION

curl_global_cleanup must be called once (no matter how many threads or libcurl sessions that'll be used) by every application that uses libcurl, after all uses of libcurl is complete.

This is the opposite of *curl_global_init*.

Not calling this function may result in memory leaks.

This function was added in libcurl 7.8.

SEE ALSO

curl_global_init(3),
